

Achieve Maximum ROI on Your Temenos Investments

Core Banking Implementation Challenges Require a Range of Responses

As a Temenos product user, you're well aware that even your best core banking implementations often accumulate their share of challenges. You may find that your software is more customized than it needs to be. Perhaps the system isn't performing to industry standards because the original implementation was rolled out without

sufficient consideration of the bank's business requirements. Or maybe you're running into integration challenges because of too many interfaces. For all of these reasons and more, it's vital that you have a suite of services that interact easily to resolve your challenges—and leave you with a highly productive and innovative implementation. Here's a quick walk-through of some of the value-added services offered by Cognizant.

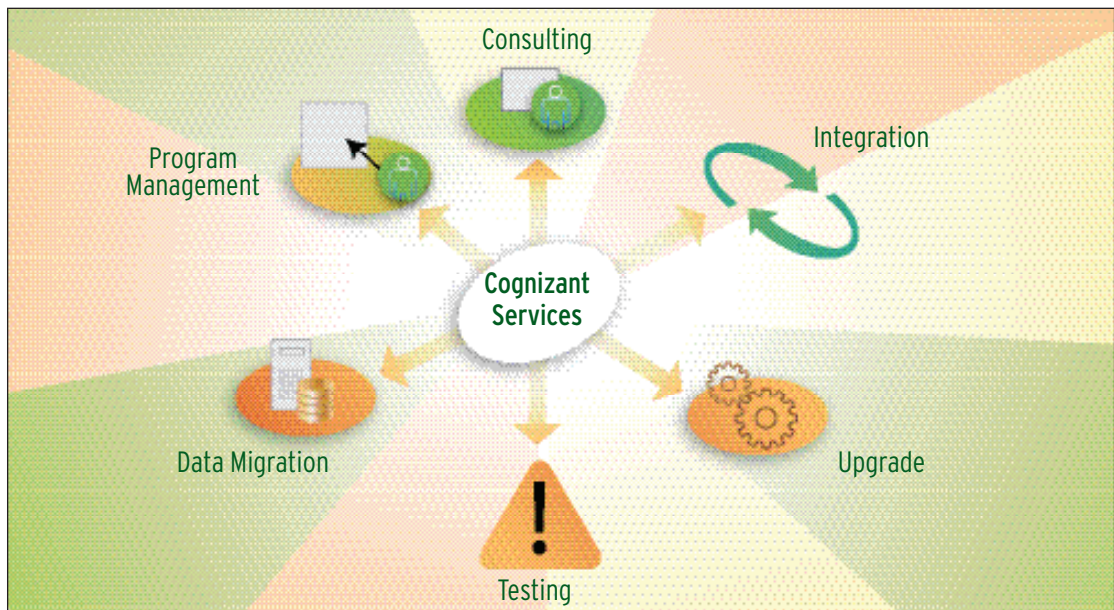

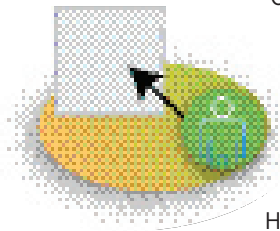

Figure 1

Program Management and Change Management

Implementing Temenos products often involves widespread organizational change and highly complex program management challenges. Your key business and technology managers are running the day-to-day operations, making it extremely difficult for them to devote adequate time to managing the implementation program.

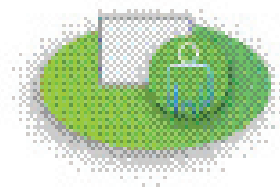

Our local professionals boast exceptional functional, technical and management skills, and they augment their capabilities by leveraging the expertise found in Cognizant's development centers in India, Argentina and Hungary. The diversity of skills and geographical spread allows us to manage complex programs like multi-geography Temenos rollouts, as well as the organizational changes required to make such programs successful.

- Program Management Office (PMO)
- Project Health Diagnostic
- Change management

Consulting Services

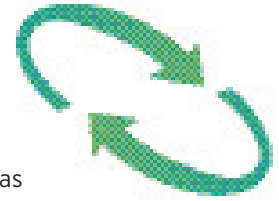

Now that Temenos and Cognizant have joined forces, banks also get high-caliber consulting services that add significant value by improving business processes. Proven in a wide range of financial services arenas, Cognizant's powerful consulting offerings quickly pinpoint problems, leverage industry standards to map out solutions, drive change and enhance business efficiency. Just one example: T24 Health Check services that are invaluable for gauging the health of current system designs, customizations, interface architecture, etc., and for offering recommendations about effective architecture, design and development methods.

Integration

We know your Temenos products don't operate in isolation. And we understand that you probably don't have the time or resources to devote to troubleshooting all the integration points. The Cognizant-Temenos partnership brings you a range of end-to-end enterprise application integration (EAI) solutions, covering areas such as: business process management; business activity monitoring; enterprise service bus, A2A, B2B and complex event processing. Our comprehensive services include: consulting; application development; application management; middleware infrastructure monitoring; EAI platform selection; and integrating T24 in the EAI platform using T24 Open Connectivity Framework and T24 Web Service Framework.

- Integration Consulting
- Application Development and Application Management
- EAI product upgrade and EAI migration
- Middleware infrastructure monitoring

Data Migration

Cognizant's DWBI practice has more than 6,000 professionals with rich experience in end-to-end data migration. Cognizant also offers its proprietary Structured Temenos Environment Migration (STEM) framework, tailored to the specifics of legacy data migration to T24. STEM consists of data profiling, validation, transformation, load, reconciliation and process control. Using STEM, we can leverage our own proprietary accelerators in data migration or use mapping and loading tools created by our partners, thereby increasing the speed of migration and minimizing the risk of migration errors.

- Structured Temenos Environment Migration (STEM™) Approach for Legacy Data Migration

Testing

Cognizant has a strong testing practice, consisting of 3,200-plus professionals who have the skills to perform system testing and system integration testing and also provide support for user acceptance testing of banking applications. We provide coverage of the entire test cycle, including patch testing, regression testing, functional/non-functional testing, load testing and more. Our test automation assets and family of reusable/pre-built assets help us reduce testing cycle times—ensuring that your Temenos implementations are more productive. We offer a variety of flexible testing delivery models, from test execution, to providing a managed test center (MTC) with either bank-owned infrastructure or a public/private cloud-based infrastructure.

Upgrade

If you have installations of Globus or early versions of T24 in your bank, your systems have likely gone through significant customization and

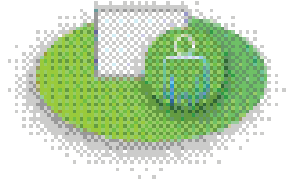

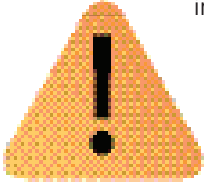

local development over the years. You now face the difficult choice of maintaining a system that works but may be difficult to scale or upgrade. Our systematic upgrade approach enables you to quickly understand the state of your existing implementations and provides a thorough feasibility study, complete with detailed cost-benefit analyses and ROI assessments. Once you are ready to upgrade, the Cognizant-Temenos upgrade roadmap ensures that the upgrade activities are phased and managed to a successful outcome. Our Back-to-Core offering minimizes customization during an upgrade, significantly increasing performance and reducing system complexity without any loss of functionality.

Cognizant's Temenos center of excellence (CoE) taps the skills of more than 300 specialists dedicated to Temenos products. In addition to the services listed above, we can quickly add ongoing support and maintenance services from our 50 delivery centers that already serve customers across the globe.
