TriZetto® TranZform® Platform

Simplifying healthcare with connected, streamlined data flows that power new capabilities, processes and experiences

Legacy systems and silos of data make it difficult for healthcare organizations to deliver the smart, streamlined experiences healthcare consumers and other stakeholders now demand. Reducing costs, achieving better care and delivering innovation are equally challenging when your organization can't easily connect the financial, quality and clinical data that hold insights about where and how to improve.

Now your organization can accelerate its shift to digital without expensive custom integrations or the capital expense of ripping and replacing existing systems. The TranZform® Platform, the power behind the TranZform® Portals and Systems of Engagement, enables your organization to easily create meaning from the data locked in your systems to jumpstart efficiencies and innovation.

Turning Data Silos into Solutions

The cloud-based TranZform Platform provides integration capabilities across your organization's disparate cost, clinical and quality data sources and creates a real-time, integrated view of information for your stakeholders. We have pre-integrated the TranZform Platform with healthcare core systems, EMRs, labs, pharmacy and member data sources through Application Programming Interfaces (APIs). By removing data silos, the TranZform Platform creates bi-direction data access that exposes relevant, actionable information in real-time to providers, payers and consumers for more informed decision

making. The API-rich TranZform Platform also enables you to eliminate custom batch integrations, expensive software upgrades and costly integration maintenance.

Your organization may deploy the TranZform Platform to power its existing portals and applications or when implementing the TranZform Portals and Systems of Engagement. However you choose to implement the TranZform Platform, your organization will:

- **Close gaps in care, improve quality scores, lower total cost of care and gain in shared savings** as the TranZform Platform enables better, faster decision making across the care continuum.

- **Improve service, engagement and outcomes and develop innovative services** for specific populations and clients based on real-time insights distilled from data combined from disparate systems.

- **Scale new capabilities to meet demand easily and cost effectively** with the cloud-based TranZform platform.

- **Port personal health information (PHI) across systems in a secure, simplified and streamlined way.** The TranZform Clinical Data Integration Engine will connect, integrate and aggregate clinical data from EMRs and other clinical systems of record (labs, HIEs, etc.) at the patient level.

- **Gain rich, actionable data analytics integration** that includes predictive cost/use and risk data, gaps in care, and care management.

- **Reduce operating and servicing costs** with better engagement and powerful self-service tools that streamline and automate processes.

- **Enable individuals to make more effective healthcare choices** based on their needs, coverage and financial status.

- **Improve business and financial decisions** with faster access to data related to benefits, costs, claims, and other business-level services.

- **Eliminate custom batch integrations, expensive software upgrades and integration maintenance** with the API-rich TranZform Platform.

- **Protect and increase the value of existing applications** as the TranZform Platform seamlessly connects their data to other applications, portals and technology, including

new solutions and applications developed by third parties or internal teams.

- **Reduce technical administrative burdens** by eliminating the need for multiple custom integrations and their maintenance with a single cloud-based platform that we upgrade and maintain.

The TriZetto TranZform Platform is a data orchestration layer, enabled by the Microsoft Azure cloud, that delivers superior front-office experiences to stakeholders across the care continuum by automating the real-time movement of data, insights and services between disparate systems of record and front-office systems of engagement. With real-time bidirectional data flows, the TranZform Platform improves ROI in existing systems, streamlines the technology stack, eliminates expensive customization and improves process efficiencies while reducing costs.

Power your digital transformation with the TranZform Platform

Whether driving more value from existing system investments or powering new engagement tools, the TranZform Platform lowers your total cost of operations, reduces the complexity of your technology stack, decreases the need for maintenance activities and future proofs your existing systems. The TranZform Platform framework and our pre-integrations shorten implementation time, so your organization experiences these benefits more quickly.

About Cognizant Healthcare

Cognizant's Healthcare Business Unit works with healthcare organizations to provide collaborative, innovative solutions that address the industry's most pressing IT and business challenges —from rethinking new business models, to optimizing operations and enabling technology innovation. A global leader in healthcare, our industry-specific services and solutions support leading payers, providers and pharmacy benefit managers worldwide. For more information, visit www.cognizant.com/healthcare.
