

Cognizant Security

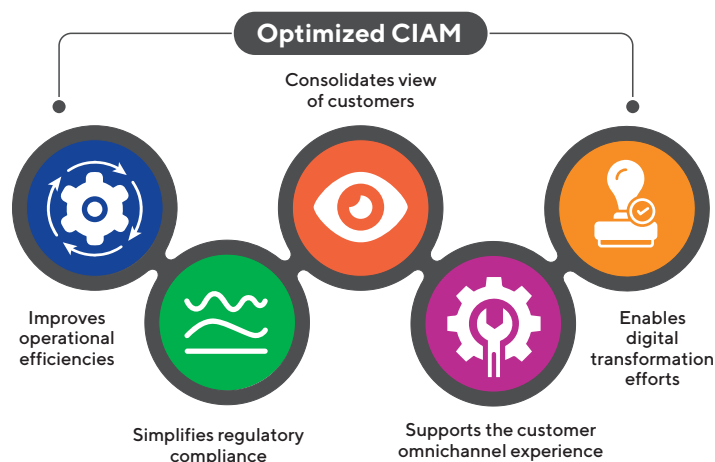

Provide an easy-to-use, highly secure authentication experience for your customers that they can enjoy using across all of your web properties

Customer Identity and Access Management (CIAM) services from Cognizant Security

Your customers demand a frictionless, highly secure way to log in to your web properties at anytime from anywhere with any type of device. At the same time, you are no doubt looking for ways to better understand your customers' interests and preferences, while also looking for a technology solution that allows you to manage customer consent, preferences and profile information from behind a single pane of glass, all delivered in a highly scalable, cost-effective model. Cognizant, a global leader with over two decades of experience in providing security consulting, professional and managed security services, can assist your enterprise with planning, implementing and managing an effective CIAM solution.

CIAM solutions are built around three key pillars:

- **Providing an outstanding customer experience.** Doing so (or not) can make or break your relationship with your customer base.
- **Ensuring privacy and meeting compliance.** Give your customers the confidence and peace of mind that you're protecting their privacy while helping your security and compliance teams meet current and future privacy compliance regulations (GDPR, CCPA and more) in an easy, automated fashion.
- **Securing your customers' logins to all of your web properties while reducing the need for passwords.** Simplify your customers' lives by providing a solution that offers a single, highly secure login that can be used across your web-facing tools estate.

Benefits of an effective CIAM implementation

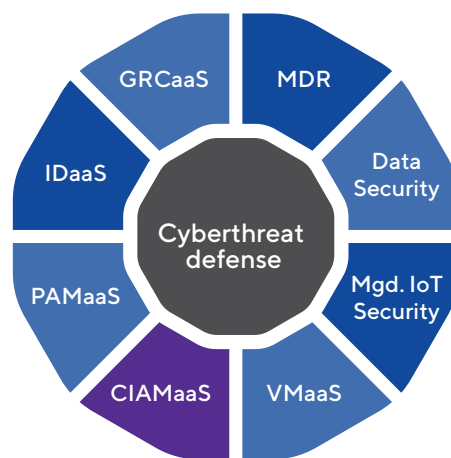

Cognizant Security's CIAM services are part of a broad portfolio of security solutions designed to help our clients to meet their security and compliance challenges.
