

THE FUTURE WORKFORCE:

THE ROLE OF HUMANS IN A MACHINE AGE

The ICEhouse | 22 January 2019 | 12:30 PM – 2:00 PM

AI, robotics, and automation are gaining speed in the modern workplace. With that comes much promise, but also much peril. Building new opportunities that won't leave the world's workers behind is a key theme at this year's WEF.

How far off are we from impactful business results due to the use of these technologies, and a potentially significant dislocation of human work as a side effect? In this session, Reuters, with the Co-founder and Leader of Cognizant's Center for the Future of Work, and other workplace evolutionary experts, will share insights into the nature and scale of AI's impact, concrete advice on how businesses can benefit from these powerful new technologies, and ideas on what the workforce and workplace of the future will look like.

The workforce is changing. Attend this session and jumpstart the future-proofing of your organization.
