Cognizant

TriZetto Elements® Suite
Maximize the potential of your government lines of business.

Finding more efficient ways to meet time-sensitive data processing, analysis and compliance requirements is essential to the success of your Medicare Advantage, Managed Medicaid and Commercial Exchange Plans.

Power up your government lines of business by extending the functionality of your core system.

The TriZetto Elements suite of applications integrates with existing core system technology (Facets®, QNXT™, legacy or other platforms) to drive administrative efficiency and optimal performance of your government-sponsored programs. Although each component can be adopted on its own to enhance a specific area of operation, the applications are designed to work together seamlessly to deliver a comprehensive solution.

TriZetto® Enrollment Administration Manager and Enrollment Administration Manager Workflow streamline the Medicare Advantage enrollment process and efficiently process MA-PD CMS transactions from enrollment to acceptance by the

Centers for Medicare and Medicaid Services (CMS). Designed to support Medicare Part C and Part D reporting requirements, Enrollment Administration Manager's automation features can increase data accuracy to boost acceptance rates and minimize manual effort. The Enrollment Administration Manager Workflow tool helps speed resolution of issues by creating efficient work processes while automating the routing and assignment of work items.

Increase government program efficiency and effectiveness by:

- Streamlining transaction processing, from enrollment to CMS submission
- Automating encounter, RAPS and risk adjustment data submission
- Facilitating interactions between the health plan and CMS
- Enabling submissions and quick responses to changes
- Speeding up and optimize reimbursement accuracy
- Improving acceptance rates

TriZetto® Financial Reconciliation Manager assists with CMS financial reporting. This solution compares your plan and CMS membership data to calculate payments and flag discrepancies. Financial Reconciliation Manager prioritizes discrepancies and supplies actuaries/underwriting with key reports and data.

TriZetto® Encounter Data Manager™ supports agency encounter transactions while enforcing submission rules to help prevent non-compliant transactions from being submitted to CMS, Commercial Exchanges or state agencies. It can help reduce costs with quick and timely resolution of submission errors, capture accurate data from multiple sources, and gauge potential financial mismatches and revenue loss. Cognizant's prebuilt Market Essential Packages are available to expedite Encounter Data Manager implementations for a specified market.

TriZetto® Claims Data Manager enhances revenue and helps your plan produce Risk Adjustment Payment System submissions and lower rejection rates. This application automates the submission of RAPS data, including supplemental data, then loads and reconciles the RAPS response files. Claims Data Manager includes online editing capabilities for claims that your plan needs to resubmit.

TriZetto® Risk Score Manager calculates risk scores utilizing CMS methodology and projects revenues for Medicare Part C and Part D. It analyzes data submitted by Claims Data Manager and Encounter Data Manager to calculate potential risk score reimbursement based on the diagnoses submitted to CMS and reconciles RAPS and Encounter Data Processing System submissions to improve the accuracy of data.

TriZetto® Risk Adjustment Manager identifies and collects risk adjustment data to support your plan's ability to increase revenue accuracy. By aggregating claims, pharmacy and demographic data, Risk Adjustment Manager uses proprietary algorithms to identify members with potential hierarchical condition category suspects. It captures chart review results and provides actionable information on chart selection to generate files for submission to CMS. Risk Adjustment Manager also provides a Prospective Evaluation Tool that assesses members' health prior to claims submission.

TriZetto® Risk Adjustment Manager for Exchanges aggregates patient data and identifies clinical suspects for risk review, coding resolution and formatting prior to CMS EDGE server submission. Indications of inaccurate or unspecified patient conditions can be recognized and addressed quickly by applying Milliman's IMPROVE advanced algorithms against claims, pharmacy data, and patient and care delivery demographics.

TriZetto® Prescription Drug Event Manager automates the workflow associated with CMS Prescription Drug Event submissions. The application imports PDE return files from CMS and the Drug Data Processing System, identifies issues, determines the reasons for rejection or acceptance, and provides the ability to correct them for resubmission to CMS. Prescription Drug Event Manager also provides peer-to-peer accounts receivable management reporting.

TriZetto® Rx Reconciliation Manager helps your plan understand CMS financial and reconciliation activity with regard to Medicare Part D. It calculates and reports on retrospective reconciliation measures, including low income cost sharing subsidies, reinsurance subsidy payments and the risk corridor. With this visibility, your plan can better understand Part D costs, utilization and prospective bid calculations.

Cognizant partner **EvolveNXT** offers an Incentive Compensation and Sales Channel Management tool that is designed to efficiently manage sales channels for all lines of business (including Medicare Advantage) and drive performance. EvolveNXT's modular solution tools include Incentive Compensation Management, Lead Management System, Producer Management, Document Management System, Communication Network Application and Centralized Broker Portal.
