

TriZetto® Configuration Migration Utility

Enabling Precision in Configuration Promotion

Payers deal with constant change. From regulatory requirements to business modifications, these changes must ultimately be reflected in the configuration of the payer's administrative software—a critical and complex task when multiple, simultaneous modifications are involved.

The TriZetto Configuration Migration Utility is an add-on tool to the Facets™ core administrative system that helps control, manage and successfully execute configuration promotions. The utility gives non-IT personnel the ability to migrate specific aspects of configuration changes from environment to environment in a manner that is controlled, workflow-integrated and audit-capable.

Facets and the Configuration Migration Utility are part of the Cognizant line of TriZetto Healthcare Products—a portfolio of software products that help healthcare organizations enhance revenue growth, drive administrative efficiency, improve cost and quality of care and improve the member and patient experience.

The Facets™ system add-on for configuration promotion

The TriZetto® Configuration Migration Utility provides enhanced control of Facets system configuration management:

- User-friendly interface
- Extensive pre-configured template library
- Reliable and workflow-driven processes
- Powerful error-avoidance functionality

With this tool, you can:

- Eliminate wholesale environment copies
- Reduce demands on specialty IT resources
- Enable adherence to change procedures and approval processes
- Reduce testing demands and rework

Promote configuration changes quickly and accurately

Database complexity often causes IT departments to perform wholesale “table copies” or copy entire environments in order to promote configuration changes from one environment to another. This can result in loss of critical test data, corruption of other in-progress configuration changes, and elongated testing cycles. Manual data migration processes can also be inefficient, resource-intensive, and lead to errors that jeopardize data integrity.

Through automated administrative controls and expanded tracking capabilities, the Configuration Migration Utility reduces migration errors and compliance issues while freeing technical resources to focus on strategic priorities. Rapid migration of data to multiple environments enables you to quickly update Facets system environments and confidently promote configuration data into production.

Efficient and effective configuration management

With this utility, requisite changes to new system configurations are validated through a progression of test environments. Configuration specialists gain access to more than 500 configuration templates that define the specific data to be managed and moved. They can also create custom templates that meet your unique business requirements. Once a template is established, an automated validation process (including 90 different rules) confirms that each migration is appropriate for the target environment, that the data is consistent with the base Facets system configuration and that it contains the right components for use in the target environment.

Utilize a simplified, controlled process for managing the progression of Configuration Changes for your Facets system with a highly effective utility that delivers increased accuracy and efficiency and reduces demands on IT resources.

The Configuration Management Utility provides:

- **Usability.** Complete migrations on a self-service basis using pre-configured templates
- **Efficiency.** Promote your Facets system configuration changes to one or all environments simultaneously
- **Specificity.** Move only the modified data, allowing for predictable and precise outcomes
- **Traceability.** Control and track data migration efforts to improve the security and auditability of the change control process.

Reach your objectives faster

In addition to Facets and the Facets Configuration Migration Utility, we offer an extensive line of solutions and services that harness the power of digital to optimize your business. Achieve new levels of performance and efficiency with Digital Business, Digital Operations, and Digital Systems and Technology capabilities from Cognizant.
