TriZetto®
Medicare Solutions for Financial Reconciliation
Financial Solutions that Can Help Optimize Medicare Revenue

Each month, Medicare plans must reconcile their Part C and Part D membership data with data supplied by the Centers for Medicare and Medicaid Services (CMS)—identifying and resolving any discrepancies. Plan and CMS data tend to vary significantly, and inconsistencies have a direct impact on plan revenue.

Financial applications support your Medicare initiatives
Optimize your plan’s revenue through the collective power of targeted financial applications. TriZetto Medicare Solutions offer three financial programs that help health plans identify, track and resolve Medicare Part C and Part D reconciliation discrepancies. These financial reconciliation applications organize work processes and streamline workflow to make reconciliation easier and more cost-efficient.

Remarkable benefits, effective reconciliation solutions.
• Financial Reconciliation Manager
• Risk Score Manager
• Rx Reconciliation Manager

TriZetto Medicare Solutions for Financial Reconciliation are part of the Cognizant line of TriZetto Healthcare Products—a portfolio of software products that help healthcare organizations enhance revenue growth, drive administrative efficiency, improve cost and quality of care and improve the member and patient experience.

These financial tools build upon each other to deliver a comprehensive solution strategy in support of your Medicare operations:

• TriZetto Financial Reconciliation Manager
This application helps Medicare plans identify and track—through resolution—factors that might cause payment discrepancies in Part C or Part D
reimbursement. The Financial Reconciliation Manager goes beyond providing reconciliation tools. This solution helps your reconciliation analysts accelerate workflow, increase efficiency and reduce costs. Financial Reconciliation Manager also produces a series of reports that support payment resolution and financial management.

- **TriZetto Risk Score Manager**
  This trending analysis and reconciliation system calculates risk scores from the returned RAPS files. Risk scores are reconciled at the Hierarchical Condition Categories (HCC) level with CMS risk scores from the Membership Monthly Report (MMR). The Risk Score Manager application also reconciles scores with HCC data from the CMS HCC Model Output Report (MOR) and the retroactive reconciliation of Part D.

- **TriZetto Rx Reconciliation Manager**
  Combining accepted drug event data from the pharmacy data management system with member demographic and payment information from the other financial-reconciliation applications, Rx Reconciliation Manager calculates and tracks low-income subsidy, reinsurance and risk-share retroactive reconciliation amounts.

Accurate and reliable membership data is critical to Medicare plans, as discrepancies between plan data and CMS data can have a negative impact on revenue. While identifying, tracking and resolving data discrepancies can be a costly and time-consuming manual process, payers who don’t undertake a thorough reconciliation process run the risk of sacrificing full, correct payment. TriZetto Medicare Solutions for Financial Reconciliation can help ease this process.

**Reach your objectives faster**
In addition to TriZetto Medicare Solutions for Financial Reconciliation, we offer an extensive line of solutions and services that harness the power of digital to optimize your business processes. Achieve new levels of performance and efficiency with Digital Business, Digital Operations, and Digital Systems and Technology capabilities from Cognizant.
