Cognizant®

Discover your Path to Episodes of Care

Discover Your Path to Episodes of Care is a new service offering that provides extensive reporting and analytics based on bundled claims data generated by the NetworX Payment Bundling Administration™ (PBA) and the NetworX Payment Bundling Administration Analytics™ products.

Our new service helps clients answer key questions in order to evaluate and participate in value-based reimbursement programs like:

- How to justify program adoption and ROI for this payment methodology?

- How to develop contracting strategies around various types of episodes of care and which providers are candidates for this type of contract?

This offering allows a current or potential clients to submit their historical claims data to Cognizant in order to determine how their claims would react in an episode of care or bundled payment contract. The claims can be compared against 97 pre-configured PROMETHEUS episodes or any custom episode definition.

This consulting engagement leverages our NetworX Payment Bundling Administration™ (PBA) and the NetworX Payment Bundling Administration Analytics™ products to generate the data we provide to the client at the end of this consulting engagement. Results are shared with the client generally within a few weeks in a Tableau (BI Tool) Reader File.

By having access to value-based reimbursement data and vastly improved analytical capabilities, payers can interpret, evaluate, design and manage their bundled payment programs more effectively. These capabilities contribute to the achievement of their program's goals to: reduce medical cost, increase quality of care and enhance patient outcomes.

The solution allows Payment Innovation Directors and other end-users to evaluate episodic based contracting opportunities by identifying potential return on investment and targeting providers with sufficient volume for contacting. This service provides clients the ability to embark on an initiative safely by conducting an initial assessment of their claims, prior to investing in a software solution.

With the NetworX PBA and PBA Analytics products working together, payers can:

▮ Leverage the industry-leading Tableau Business Intelligence (BI) tool for visualization of data and report views that provide drill-down and drill through navigation of their bundled payment programs.

▮ Use report views to support the discovery phase of their program development to identify potential episodes of care, attributing providers and current fee-for-service cost.

This services-based offering satisfies the following client objectives:

Client

▮ Reduce the risk, time and cost of developing a value based program.

▮ Visualize how their historical claims data is used and compared to 97 certified PROMETHEUS and/or custom episodes of care definitions.

▮ Receive more than a high level static report with their claims data.

▮ Receive actionable data to determine potential ROI and contracting strategy.

▮ Get started now developing their contracting strategies and value based programs.

Cognizant

▮ Proactively overcome the most common objectives we face with prospects and current clients who are evaluating whether or how best to create and develop their value based programs.

▮ We provide prospects with the results of the analysis through our PBAA Discovery reports. The reports are built with Tableau and include a reader file with the results of their claims.

▮ Within a few weeks from receipt of claims properly mapped to our custom file format, we provide prospects with the actionable data necessary to develop their contracting strategy and launch their value based program.
