Does your dental plan software have the capacity to administer today’s more complex dental programs with increased automation, accuracy and consistency?

AutoDental is a comprehensive dental plan management solution that is deeply integrated with the TriZetto QicLink Enterprise core administration system to give you control over dental plan administration processes ranging from dental plan set-up to check printing. Whether you are looking to achieve operational efficiencies or manage complex dental benefits programs, AutoDental delivers the functionality you need.

To maximize CBX benefits, a comprehensive matrix must be created—typically, a 9-to-12 month process. The additional plan building required to support CBX is also time-consuming. Further, inappropriate assumptions built into the CBX table will result in adjudication errors and inconsistencies.

Increase productivity and enhance the rate of auto-adjudication for dental claims.

AutoDental can help you reduce processing costs and increase productivity.

Reduce costs with electronic submission and auto-adjudication.

AutoDental incorporates user-defined dental processing edits established for each procedure code and plan to drive increased auto-adjudication for claims and encounters. In addition to improving productivity, processing accuracy and consistency is enhanced because decisions are universally applied by a pre-determined knowledge base.

When used in conjunction with QicLink ClaimWorkflow, AutoDental can accept claims electronically from various sources—remote locations, electronically or via OCR input from high-speed data entry. Work queues can be established for those claims or encounters that do not auto-adjudicate on first pass. Based on code type, second pass transactions are electronically routed to appropriate stations for action. These same programs are also used for processing pre-determinations.
**Benefits**

- Increase productivity, accuracy and consistency with automated operations
- Save staff time—adjusters review only those claims that do not auto-adjudicate on first pass
- Increase throughput by allowing claim/encounter data capture from multiple sources

**Reach your objectives faster**

In addition to TriZetto QicLink AutoDental, we offer an extensive line of solutions and services that harness the power of digital to optimize your business. Achieve new levels of performance and efficiency with Digital Business, Digital Operations, and Digital Systems and Technology capabilities from Cognizant.

**AutoDental**

AutoDental can modify payment parameters based on provider specialty code and will automatically replace obsolete procedure codes. The system will also perform procedure edits—including valid tooth surfaces, age requirements, patient relationships and required documentation. The application integrates with dental usual and customary tables and stores member/enrollee dental histories, including data incurred prior to AutoDental implementation. Tooth charts automatically update with each claim.

You can also use the system to generate dental pre-authorizations, including pre-treatment payment estimates, and these pre-treatment authorizations can be converted to claims after dental services are delivered. Automatic payments for orthodontia can be scheduled, as well.

**With AutoDental, you can:**

- Cut processing costs by accepting data electronically
- Perform real-time and/or batch claims and encounter processing
- Administer fee-for-service, PPO and full point-of-service plans
- Auto-adjudicate claims in a real-time or batch mode
- Automatically replace obsolete procedures and/or define conditions to deny, suspend or assign an alternate procedure
- Develop work queues to resolve suspended claims that did not adjudicate on first pass
- Access comprehensive online user documentation
