Healthcare

The fastest way to modernize everything. Without rebuilding anything.

End-to-end managed services for applications and infrastructure.
Brought to you by Cognizant and AWS.

We run the technology. You move healthcare forward.

Most IT transformations fail the same way: They demand more people, more time and more budget before delivering any real value.

But what if you didn't have to build and manage everything yourself?

With managed services from Cognizant and Amazon Web Services (AWS), you step into a fully managed, secure and optimized environment—and start realizing value on day one.

Two technology leaders. One fully managed solution.

Cognizant TriZetto® is the number one core administration system for healthcare payers. AWS is the top-ranked cloud infrastructure provider.* Together, we deliver end-to-end managed services that:

- Accelerates cloud transformation with a preconfigured, HIPAA-ready environment
- Reduces compliance, change management and upgrade costs by up to 50%
- Automates up to 80% of manual HIPAA compliance work, freeing up 2,000–4,000 hours annually
- Strengthens security with built-in ransomware detection, AI-driven threat response and faster time to detection
- Unlocks AI and agentic automation to reduce manual claims processing and improve speed and accuracy

* Cognizant ranked as a top performer in the Claims & Administration Platforms (Payer) segment in 2026 Best in KLAS report for core platforms. AWS ranked as a top performer in Best in KLAS Public Cloud in 2026.

A roadmap for continuous innovation

TriZetto solutions are optimized for AWS and enhanced through a five-year, 17-product roadmap focused on generative AI and agentic operations. Instead of struggling to keep up, payers can stay ahead with:

- Automatic quarterly enhancements, including container hardening, new API bundles, core agents, HL7 Fast Healthcare Interoperability Resources (HL7® FHIR®) resources and more
- Optional modular deployments of new features
- SaaS delivery to simplify upgrades and reduce delays
- A continuous improvement cycle that accelerates innovation
- Turnkey AI-ready transformation without added IT infrastructure or operations overhead

Real-time insight across the organization

Payers can now see their entire managed environment in one place. Observability as a service (OaaS) brings together logs, metrics, traces and business KPIs into a single, secure dashboard. With AI-powered monitoring and machine learning detectors, payers can catch and resolve issues quicker.

Faster time to value

Unlike traditional approaches, you don't start from scratch. Our environment comes pre-built with security, compliance and operational best practices. Many customers gain up to a six-month head start by leveraging our preconfigured, HIPAA-ready environment with core ingress/egress patterns already in place.

Free your team to focus on what matters

With Cognizant and AWS managing your core environment, your team can concentrate on what actually moves your business forward. Discover how we can help you:

- Streamline preauthorization and care management workflows
- Eliminate on-prem data center costs
- Free up scarce DBA and system admin talent
- Enable predictable per-member/per-month pricing
- Accelerate digital transformation at scale
