

Workday 2024 R2 Release Impact Analysis

EIB

2024

EIB

Automatically available features

Integrations - EIB spreadsheet layout for import external student information web service

What's changing

With this update, Workday streamlines the EIB template for v43.0 of the Import External Student Information web service. We consolidate the External Student Data sheet into the Import External Student sheet.

This makes it easier for you to avoid using a different header key for each row, causing the rows to run as separate jobs and leading to performance issues.

We also replace the Header Key and Line Key columns with a new Spreadsheet Key column. You can add unique sequential numbers to the new column.

Additional considerations

This feature makes it easier for you to format the data for your Workday integrations.

What do i need to do?

- There's no action required. This update is automatically available.

What happens if i do nothing?

- If you use versions prior to v43.0 of the Import External Student Information web service, you won't see these changes.

Workday 2024 release 2 automatically available features

Prior to 2024 release 1	Post 2024 release 2	Impact
In V42.2 template has 2 columns Header Key and Line Key in the sheet. If we use different header key for each row, causing the rows to run as separate jobs and leading to performance issues.	In V43.0 template has one column 'Spreadsheet Key' in the sheet. This makes it easier for us to avoid using a different header key for each row.	<div>Y/N: No</div> <div>Impact description:</div> <div>N/A</div>

Area	All												
Restrictions	Required	Optional	Optional	Required	Optional	Optional	Optional	Optional	Optional	Optional	Optional	Optional	Optional
Format	Text	Y/N	Y/N	Academic Unit Name	Academic Level ID	YYYY-MM-DD	Y/N	Number (6-6)	Student Academic Standing	Student Load Status	Number (5-2)	Student Course Unit Class Standing Date	
Fields	Spreadsheet Key	Student Active	Do Not Release Dire Academic Unit	Academic Level	Expected Graduation	Work-Study Eligible GPA	Academic Standing	Student Load Status	Enrolled Units	Enrolled Unit Type	Class Standing		

Integrations - Improved performance for import web services

What's changing

With this release, Workday updates the layout of Enterprise Interface Builder (EIB) spreadsheets for mass loading data for several Import web services related to Contact Information and Personal Information.

Replacing the Header and Line Key columns with the single Spreadsheet Key column avoids confusion and improves performance for EIB integrations

Additional considerations

Workday replaces the Header and Line Key columns with the Spreadsheet Key on these web services for v43.0:

- Import Change Home Contact Information
- Import Change Work Contact Information
- Import Person Photos
- Import Universal Identifiers

What do i need to do?

- There's no action required. This update is automatically available.

What happens if i do nothing?

If you use versions prior to v43.0 of the webservices mentioned here, you won't see these changes.

- Import Change Home Contact Information
- Import Change Work Contact Information
- Import Person Photos
- Import Universal Identifiers

Import External Student Information V42.2

The screenshot shows the Microsoft Excel interface. The title bar indicates the file is "Import_External_Student_Information_v402.xlsx". The ribbon includes tabs for File, Home, Macros, Insert, Draw, Page Layout, Formulas, Data, Review, View, Automate, Add-ins, Help, and BQ.

The main workspace displays a table titled "External Student Data". The table has columns labeled A through O. Row 1 contains the header "External Student Data". Row 2 contains the header "Area All". Rows 3 through 6 contain data rows with various fields such as Restriction, Required, Optional, Academic Unit, Academic Level, Expected Graduate, Work Study Eligible, GPA, Academic Standing, Student Load Status, Enrolled Units, Enrolled Unit Type, and Class Standing.

Integrations - Handle import processing errors check box for EIBs

What's changing

With this update, Workday enables you to run Enterprise Interface Builder integrations (EIBs) to handle import processing errors gracefully. They also Update the Launch EIB v43.0 web service to support this functionality.

This enhancement increases the effectiveness of error handling on the data that Workday imports, resulting in more accurate and consistent data.

Additional considerations

Workday adds a new Handle Import Processing Errors check box on the Integration Criteria table on the Launch/Schedule Integration task. When selected, it enables the EIBs to run without failing when there are import processing errors. The check box is selected by default.

Workday also add a Handle Import Processing Errors field to the View Background Process page.

Note: This update applies only to EIBs created for Import v43.0 or greater web services. You can view the name and version of the web service that your EIB uses in the View Integration System Page.

What do i need to do?

There's no action required. This update is automatically available.
