

Workday 2024 R2 Release Impact Analysis

Integration task

2024

Integration task

Automatically available features

Integrations - Purge pre-hire data

What's changing

With 2024R2, Workday enables you to purge data for Pre-Hires who don't have a candidate, student, or worker record in Workday.

This update enables you to clean up a large volume of extraneous data and helps your organization to maintain compliance with data protection and General Data Protection Regulation (GDPR) requirements.

Additional considerations

Existing purgeable data types

Workday enables these existing purgeable data types (PDTs) so that you can use them to purge data for Pre-Hires who don't have a candidate, student, or worker record in Workday:

- Names
- Contact Information
- Personal Information
- Person's IDs
- Person's Payment Elections
- Pre-Hire Resume
- Event Data
- Questionnaire Results
- System
- Universal ID

What do i need to do?

You must access the Purge Person Data task if you want to purge data for Pre-Hires who don't have a candidate, student, or worker record in Workday. To remove payment election data for Pre-Hires, Payroll administrators must create a custom report, then access the Purge Person Data task.

What happens if i do nothing?

All Pre-Hire data remains in Workday.

Community link

<https://doc.workday.com/release-notes/en-us/hrinfra/8083398.html>

Integrations - Purge pre-hire data (cont.)

Additional considerations

New purgeable data types

Workday also deliver these new purgeable data types (PDTs) so that you can use them to purge data for Pre-Hires who don't have a candidate, student, or worker record in Workday:

- Pre-Hire ID
- Pre-Hire Data

Payment election data

Payroll administrators can now remove payment election data for Pre-Hires.

Note: You can only purge data for a Pre-Hire when:

- The Pre-Hire is created as a standalone Pre-Hire.
- There's no active, terminated or former worker, student, or candidate record linked to the Pre-Hire.
- The Pre-Hire doesn't have complete or in-progress Hire events.
- The Pre-Hire doesn't have incomplete events.
- Payment Election Data

Integration – Integration event statuses

What's changing

With this update, we enhance the performance and usability of Workday integrations by improving the accuracy of our integration event statuses.

If an integration reaches a timeout limit, we display a Failed status instead of a Completed with Errors status. For integration events with a Failed status, we recommend checking the integration logs, troubleshooting any issues and then rerunning the integration.

This update enables you to more accurately identify, assess, and troubleshoot potential issues and errors with your integrations, improving efficiency and usability.

Additional considerations

Form completion assistant

What's changing

With this release, we enhance the visibility of Form Completion Assistant prompt recommendations by displaying them below supported prompts.

We also enable the Maintain Machine Learning Prompt Recommendations task to manage prompts supported by the Form Completion Assistant.

Form Completion Assistant is optimized for Universal Main Subscription Agreement subscribers, but all purchasers of relevant SKUs can use it.

Security for personal information items

What's changing

This enhancement provides users with a more consistent experience when securing Personal Information items and prevents unintended access to data.

Custom ID Report Field: We add more granular security to the Custom ID report field by removing it from the Public Reporting Items domain and adding it to these domains:

- Audit: Student Data
- Person Data: ID Information
- Person Data: Other IDs
- Pre-Hire Personal Data: ID Information
- Self-Service: ID Information
- Self-Service: Other IDs
- Worker Data: Beneficiary Other IDs
- Worker Data: Current Staffing Information

Additional considerations

N/A

What do i need to do?

- There's no action required.
This update is automatically available.

What happens if i do nothing?

No data will be populated for the fields moved from public reporting domain to the new domains if the ISU/User does not have access to the new domains.

Setup required features

Supplier sales order number and shipping method for purchase order processing with EDI 850

What's changing

With this release, Workday enables you to issue purchase orders with supplier sales order numbers if you have procedure information enabled when using EDI 850 to reduce work for bill-only and consignment orders. You can now also include the shipping method when issuing purchase orders with EDI 850 to ensure rush orders are processed correctly.

This increases support for issuing purchase orders with EDI 850 for bill-only, consignment, and rush orders while reducing user error from manual data entry and increasing visibility of key information in your purchase orders.

Additional considerations

- Workday enables adding a new EDI Code field that you can use to specify a shipping method on Maintain and View Shipping Information tasks.
- Workday also adds the new EDI Code field to the web services Get_Shipping_Methods and Put_Shipping_Methods.
- Workday now populates the EDI code in the header TD512 segment of your outbound EDI 850 integration XML files when the shipping method is defined with an EDI code.

What do i need to do?

- Opt-in to rush order EDI codes
- Set up the Supplier Sales Order Number field

What happens if I do nothing?

Nothing. If you need EDI codes for rush order or the Supplier Sales Order Number field, you will need to continue the current workaround to get information to the supplier.

Community link

<https://doc.workday.com/release-notes/en-us/smorder/7610427.html#Impact-tab>

Supplier sales order number and shipping method for purchase order processing with EDI 850 (cont..)

What's changing

With this release, Workday enables you to issue purchase orders with supplier sales order numbers if you have procedure information enabled when using EDI 850 to reduce work for bill-only and consignment orders. You can now also include the shipping method when issuing purchase orders with EDI 850 to ensure rush orders are processed correctly.

This increases support for issuing purchase orders with EDI 850 for bill-only, consignment, and rush orders while reducing user error from manual data entry and increasing visibility of key information in your purchase orders.

Additional considerations

- Workday enables adding a new EDI Code field that you can use to specify a shipping method on Maintain and View Shipping Information tasks.
- Workday also adds the new EDI Code field to the web services `Get_Shipping_Methods` and `Put_Shipping_Methods`.
- Workday now populates the EDI code in the header TD512 segment of your outbound EDI 850 integration XML files when the shipping method is defined with an EDI code.

Delivery date changes

As of August 07:

- **Preview Date:** 2024-08-17
- **Production Date:** 2024-09-21
- **Service Update Date:** 2024-08-17

Community link

<https://doc.workday.com/release-notes/en-us/smorder/7610427.html#Impact-tab>

Supplier sales order number and shipping method for purchase order processing with EDI 850 (cont..)

Additional considerations

- When you use EDI 850 to issue purchase orders to suppliers, you can use the new Supplier Sales Order Number field to include a supplier sales order number on your purchase orders. Workday adds the new Supplier Sales Order Number field under the Procedure Information tab for requisitions, purchase orders, and change orders.
- Workday also updates procurement web services by adding the new Supplier Sales Order Number field, so that you can view or edit the supplier sales order number:
- Workday updates the Configure Optional Fields task by adding Supplier Sales Order Number as a field that you can configure to display for users
- By default, Workday hides the Supplier Sales Order Number field.
- Workday now populates the supplier sales order number in the header REF^VN segment of your outbound EDI 850 integration XML files. The segment won't be generated if the supplier sales order number isn't populated on the purchase order.
- Workday also delivers new report fields (secured to the Public Reporting Items domain) that you can use in your custom reports: EDI Code, Supplies Sales Order Number.
