Unlock your data with Cognizant® and Oracle Fusion Data Intelligence

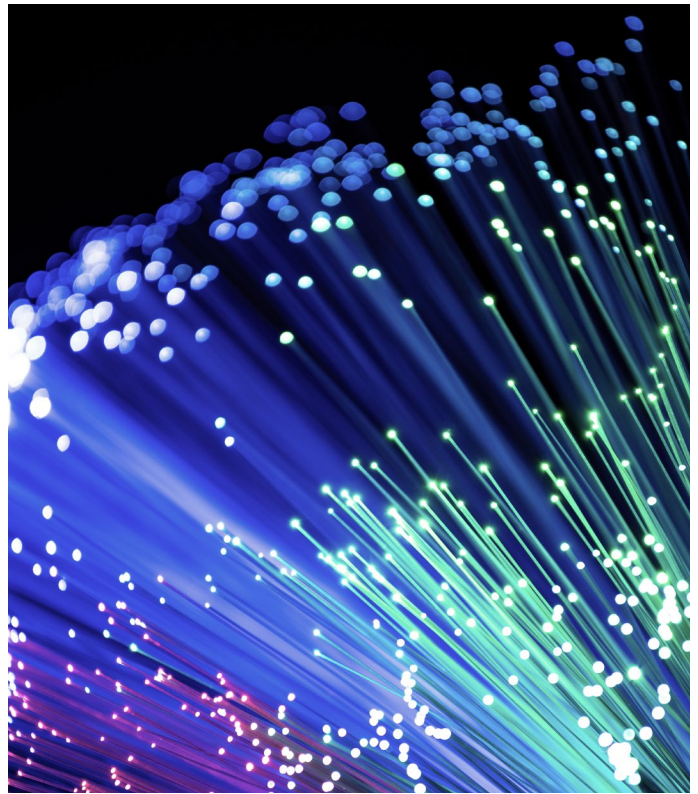

Make your data work harder, everywhere,
for everyone

Analyze across clouds and act with confidence

Data can be a catalyst for smarter decisions and business transformation. Yet as organizations embrace multicloud strategies, data can become increasingly distributed, siloed, and difficult to trust.

Access to consistent, trusted data is key to helping your organization to make faster, more insightful decisions and to be able to introduce AI-assisted innovations sooner.

If you're working with Oracle solutions across multiple clouds and trying to achieve more consistent, trusted insights, Cognizant can help. With Oracle Fusion Data Intelligence, we bring your data together, from AWS, GCP, and beyond, into a single, unified view. By blending Fusion and non-Fusion data, like HR help desk and absence records, we help you unlock smarter planning and forecasting. Plus, with built-in GenAI and advanced analytics, you also get faster, more actionable insights to drive innovation within your organization and stay ahead in a rapidly changing business landscape.

What's getting in the way of smarter decisions?

The sheer complexity of data can slow your organization down, presenting you with a range of challenges that can include:

- **Siloed data and apps** across cloud and departments that lead to chaotic management, time-pressured analysis and poor governance.
- **Overreliance on desktop visualization tools** can leave organizations having to make do with disjointed, manual reporting efforts.
- **Fragmented departmental BI tools** can delay insights and impair critical decisions.
- **Limited AI/ML capabilities** are restricting teams from generating predictive insights.
- **Emerging tech like GenAI and unified analytics** require modern platforms that most legacy systems simply can't support.

One platform, total clarity

Oracle Fusion Data Intelligence tackles these challenges head-on, bringing together data, automation and intelligence for your organization in a single secure, multicloud-ready platform.

Smarter integration across the Cloudscape

Oracle Fusion Data Intelligence connects to data natively across Oracle Cloud Infrastructure (OCI), AWS, GCP and Azure using certified connectors, consolidating Fusion and non-Fusion data into a single view.

No manual extraction
or stitching required.

Real-time pipelines
keep insights fresh and actionable.

Native support
for Oracle Autonomous Data Warehouse.

Semantic layer
extends to HR, finance, supply chain and more.

Unify, enrich and trust your data

Oracle Fusion Data Intelligence enables you to build a 360° business view by blending application data with third-party datasets.

Prebuilt models and dashboards
across HCM, ERP and CX.

Enhanced KPI tracking
and custom metric configuration.

Contextual data views
for faster and more accurate decisions.

Enterprise-grade security
with role-based access baked in.

AI for everyone, insights for everything

Oracle Fusion Data Intelligence also democratizes intelligence with its embedded machine learning and GenAI-ready capabilities to help users across all your departments make smart data-driven decisions:

Predictive analytics
for planning, forecasting and optimization.

Natural language queries
and GenAI prompts for non-technical users.

Embedded AI
recommendations surface insights you didn't know to look for.

Case studies in data-driven success

Residential security provider

Oracle Fusion Data Intelligence gave this client a single source of truth across all its departments, reducing manual data handling and improving decision-making speed. Configurable KPIs enabled greatly enhanced business trend visibility.

Our solution

We migrated the client from a legacy on-premises Oracle Business Intelligence Applications system to the next-generation, cloud-based Oracle Fusion Data Intelligence platform. Key actions included:

- Retaining historical Core HR data as a trusted source for future reporting.
- Deploying the Oracle Fusion Analytics Warehouse (FAW) solution on a private cloud.
- Enabling configurable KPIs to track business trends more effectively.

Outcomes:

50%

reduction in manual data handling

30%

faster decision-making

4X

improvement in business trend visibility

Empowered reporting users to build reports and visualizations independently

Enabled downstream teams to integrate and leverage data across the enterprise

Scalable data architecture with prebuilt HCM Cloud reports and cross-functional reporting capabilities (e.g. ERP, SCM)

Case studies in data-driven success

Energy & Utilities Provider

Legacy reporting was modernized with Oracle Analytics Cloud. This resulted in real-time analytics, self-service insights and support for AI/ML-powered decision-making across their legacy and Cloud applications.

Our Solution

Implementation of Oracle Analytics Cloud. The customer now has a single source of truth for consolidated reporting across current and legacy applications.

Our Outcome

Leveraging Oracle Analytics Cloud to consolidate reporting across current and legacy applications and helps to generate deeper insights with AI/ML use cases and near real-time analytics.

Case studies in data-driven success

Real world fix: how we unify fragmented HR data

The challenge:

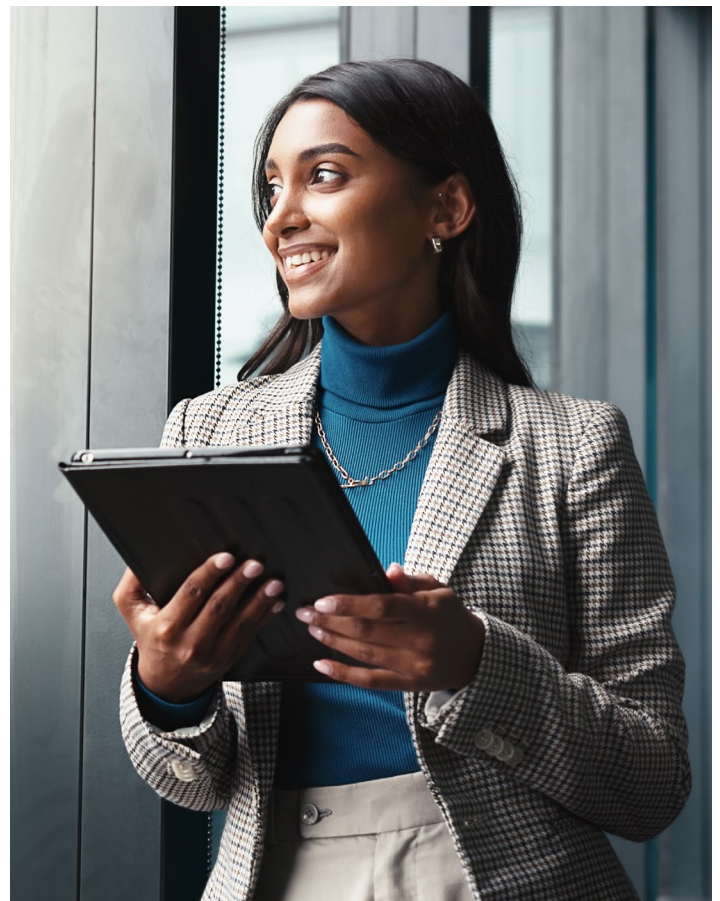

A HR department experienced data fragmentation when storing non-Fusion helpdesk system data in AWS S3, creating challenges when trying to connect insights with Oracle Fusion Cloud HCM data with HR help desk data.

Our solution:

- We integrated ticketing data from AWS S3 into Oracle Autonomous Data Warehouse, blending it with Oracle Fusion Cloud HCM data in Oracle Analytics Cloud using Oracle Fusion Data Intelligence semantic layer.
- Fields such as issue type, resolution time, department and tenure were unified
- Resulting dashboards showed full employee case history and HR performance trends
- Strategic HR planning improved with complete, contextualized analytics

Our outcome:

Faster issue resolution, improved employee experience and better forecasting of HR service needs.

Why choose Cognizant and Oracle Fusion Data Intelligence platform?

Cognizant's solution goes way beyond features to deliver smarter, simpler outcomes faster, with less effort.

Business-ready insights, faster

No more waiting on technical teams

Trusted data at scale

Unified data protected by enterprise-grade security

AI for everyone

Accessible insights provided via natural language

Multicloud made easy

Flexible integration across Clouds

GenAI and advanced analytics

Future-proof intelligence

Secure by design

Built-in protection for your sensitive data

Benefits that scale, simply and consistently

Consistency across deployments

Unified experiences across business units and regions with cloud-native analytics.

Flexible extensibility

Customize your insights using custom data, AI/ML models and third-party data sources.

Industry adaptability

Oracle Fusion Data Intelligence supports a wide range of industry and business requirements use cases with ease.

Global reach

Oracle Fusion Data Intelligence offers different deployment options to fit your needs.

Why Cognizant?

With a 25-year Oracle partnership and over 4 Oracle Partner Awards in 2024, Cognizant can offer you Oracle cloud experience and multicloud delivery at scale.

- Top 3 global provider of Oracle-certified cloud professionals
- Global System Integrator (GSI) featured partner
- 500+ Oracle cloud transformations across industries
- Expertise across OCI, AWS, Azure, GCP and hybrid cloud
