

IMPROVE MEDICAL RECORD DOCUMENTATION

Clinical Documentation Improvement (CDI) is growing in every leading U.S. hospital system. These programs directly impact quality measures, admission standards, acuity and severity levels, clinical indicators, resource utilization, pay-for-performance, value-based purchasing, population management and advanced model initiatives that require exceptional specificity of clinical documentation and accuracy of reporting.

Partner with Us

Bolder Healthcare CDI solution utilizes highly qualified clinicians in multiple capacities in both an inpatient and outpatient setting: assessments of existing CDI Programs, staff augmentation and the start-up of new programs. By blending the right people, processes, and technology to help reduce compliance risks, minimize audit vulnerability, and provide insight into quality of care and real-time outcomes measurement, our service can improve your bottom line while you simultaneously improve documentation of patient care.

CDI Solution Experts

As one of the exclusively clinician-driven CDI models in the industry, our clinicians work hand in hand with your physicians to ensure their level of understanding in what constitutes a compliant medical record while also providing the highest level of reimbursement allowed.
