

## Data Sheet

# TriZetto Configuration Orchestrator

Benefit packages are always changing, and health plans rely upon industry-leading solutions to help them adapt quickly to changing circumstances. Many partners offer services that allow health plans to custom design a packaged solution of benefit products, provider networks, and contract terms, as well as produce marketing, sales, and regulatory validation material to support them. Yet even with these tools, such data must still be synchronized with the health plan's core administrative solution. That process can be labor-intensive and costly.

TriZetto® Configuration Orchestrator automates the input and configuration of benefit plan and provider networks into health plan core administrative systems, such as TriZetto Facets® and TriZetto QNXT™.

TriZetto Configuration Orchestrator automates the input and configuration of benefit plans and provider networks into health plan core administrative systems, saving clients significant staff time and cost and reducing the possibility of error that manual configuration entails. The solution can load and configure data within many core administrative systems—such as TriZetto Facets and TriZetto QNXT—and can extract data from many benefit and provider configuration tools.

**The result?** A faster and more accurate loading of benefit and provider data to your core administrative system.

### Components of Configuration Orchestrator:

#### Trusted partner

Collaboration ensures that Configuration Orchestrator remains fully compatible with updates to connected solutions.

#### Expert maintenance staff

Your contract includes not only the solution but also expert Cognizant staff to monitor and maintain it.

#### Fully automated input process

Configuration Orchestrator automates the full process of inputting provider network and benefit configuration data, allowing you to devote your staff to higher-value responsibilities.

### Value of Configuration Orchestrator:

#### Greater efficiency

Streamlined loading reduces the time required to construct, update, and modify benefit and provider plan configurations to core administrative systems.

#### Better accuracy

Automatic loading and translation from source formats enable more accurate data input into core administrative systems.

#### Lower staffing pressure

The solution eliminates the need for staff to expend time manually creating benefit and/or provider plans.

**Contact us to learn how Configuration Orchestrator raises the speed and accuracy of loading data to core administrative systems.**
