TriZetto Intelligent Test Orchestrator

Health plans need the ability to quickly adjust the configuration of their core administrative systems to respond to new regulatory requirements, new lines of business and changing market conditions. Yet, validating new configuration data changes and performing QA testing requires a great deal of manual effort. These tasks also require staff with specialized knowledge of claim processing and configuration design. Clunky, disjointed testing processes cost health plans money, both in terms of increased operational cost and missed opportunities from delays caused by slow testing cycles.

Perhaps more critically, testing that uses live patient information carries the risk of data breaches and PHI that lingers in poorly defended test environments long after testing is completed. This risk is further exacerbated when replicating testing data sets for new test cases. Health plans need to accelerate and simplify testing while still managing PHI securely.

Simplify, accelerate and unify QA testing into an end-to-end, single-touch process with the automation and generative AI of Intelligent Test Orchestrator.

TriZetto® Intelligent Test Orchestrator delivers an intelligent, end-to-end application that orchestrates the entire QA test cycle and leverages generative AI to raise productivity, improve efficiency, lower costs and enhance data security. AI unifies all stages of QA testing—including finding CPT codes, identifying claims, creating synthetic test data and executing the testing itself—into a single-touch solution. Powerful generative AI translates testing criteria into viable test parameters and generates synthetic, PHI-free data, further streamlining testing.

Innovative processes and better-than-production synthetic data eliminate the use and storage of PHI-laden patient data for testing, which reduces the PHI exposure risk. Our solution uses no live patient data stored in vulnerable cloud servers, and innovative data storage protocols preserve synthetic data for future testing cycles. Intelligent Test Orchestrator is an intelligent, end-to-end solution securely accelerates and simplifies the entire QA testing process.

Components of Intelligent Test Orchestrator

Industry's only end-to-end QA testing solution

Intelligent Test Orchestrator unifies all phases of testing—from parameter development through data generation to execution and reporting.

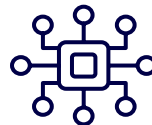

AI-powered, single-input testing

AI eliminates the need for staff to manually advance through phases or load outputs from one tool to another. Just input testing criteria and the solution completes testing.

Secure, PHI-free testing

No live patient data is used during the testing process, nor is it stored on any cloud locations, which preserves cybersecurity and patient privacy.

Better-than-live synthetic data

Intelligent Test Orchestrator generates synthetic data that performs better than live patient data by better assessing configuration performance on edge cases.

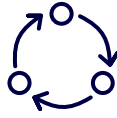

Value of Intelligent Test Orchestrator

Reduced testing cost and complexity

Our unified solution lowers overall QA cost and complexity by eliminating manual work to raise productivity and obviating disparate components.

More efficient test cycles

AI-driven, end-to-end automation unites all stages of QA testing—finding CPT codes, identifying claims, creating synthetic test data and testing—in a one-touch solution that raises staff productivity.

Improved testing data security

Innovative processes and synthetic data eliminate the use and storage of PHI-laden patient data for testing, reducing the risk of security breaches and PHI exposure.
