

TriZetto® QicLink dataPiction®

The answer to ad hoc report writing

Speed, efficiency, and information sharing are essential to meeting the demanding data analysis requirements associated with today's health plan offerings. The TriZetto QicLink Enterprise dataPiction solution lets you access plan data using powerful relational database reporting and query tools.

QicLink dataPiction is part of the Cognizant line of TriZetto Healthcare Products—a portfolio of software products that help healthcare organizations enhance revenue growth, drive administrative efficiency, improve cost and quality of care and improve the member and patient experience. The scalable dataPiction software serves a wide range of user implementations ranging from desktop solutions for single users to enabling report writing capabilities that span your enterprise operation.

With TriZetto's dataPiction product, you can access data using today's powerful relational database reporting and query tools.

The system allows report distribution and offers an Open Database Connectivity (ODBC)-compliant report writing tool for Web-based publishing—making dataPiction a reliable solution for your company's ad hoc reporting needs.

Using the dataPiction application, QicLink system users can select from a wide variety of data models that offer different views of their relational database. They can then develop custom reports based on those tables and views. The product gives users the ability to create queries from the relational views of all QicLink tables. Queries are easy to build because the relational views provided in dataPiction incorporate user-friendly column (field) names. Using dataPiction along with an ODBC-compliant report writing tool, such as Crystal Reports or Microsoft Access, your organization can quickly develop client-specific ad hoc reports. The software provides direct access to data from your QicLink relational database via any SQL-based query tool.

dataPiction provides the following key benefits:

- Easy to use
- Accesses over 800 QicLink tables
- Supports any ODBC-compliant report writing tool
- Directly accesses data with minimal CPU impact
- Reduces unnecessary data extract processes
- Supports ODBC-compliant report writing tool for publishing reports to the Web

- Scales with ease
- Requires no additional hardware or professional database administrator
- Significantly enhances your analysis capabilities

How does dataPiction work?

After a report need is identified, the user selects the desired data from the QicLink Data Models and Table Views utilizing the dataPiction Data Dictionary. The user then determines which QicLink tables/views and columns/fields are necessary for the report. The report is then created by accessing QicLink columns using an ODBC-compliant report writing tool with Microsoft ODBC Driver 11 for SQL Server.

What does dataPiction include?

- TriZetto-defined Data Models and Table Views (Data Dictionary)
- SQL conversion scripts to create the dataPiction views for tables contained in a QicLink SQL Server database

Reach Your Objectives Faster

In addition to the TriZetto QicLink dataPiction application, we offer an extensive line of solutions and services that harness the power of digital to optimize your business. Achieve new levels of performance and efficiency with Digital Business, Digital Operations, and Digital Systems and Technology capabilities from Cognizant.
